Hector Andres Perez Villatoro

Trevor Lee

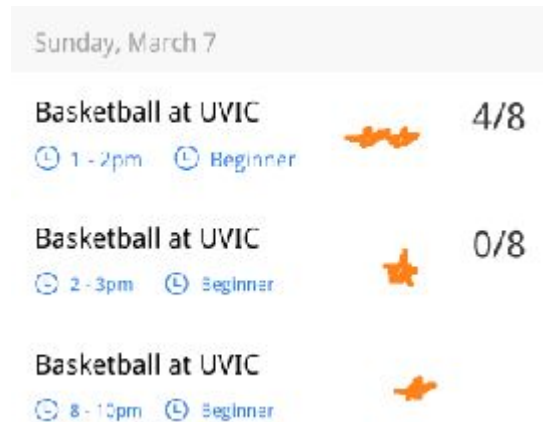

RECOMMENDATIONS

The system should give more feedback to the user when they are selecting objects. For example, the system could briefly highlight the object a user selects and then move to the next screen.

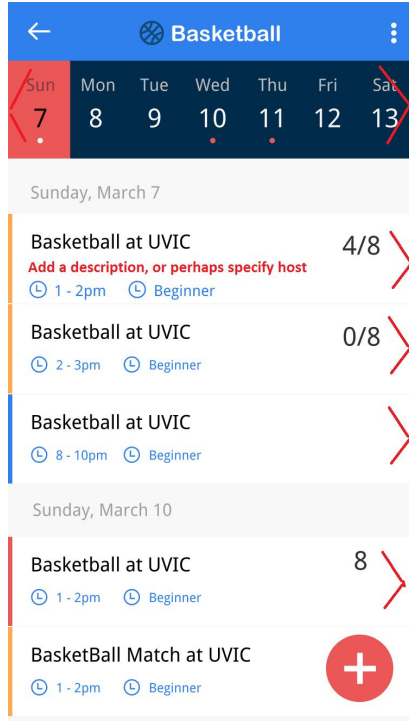

RECOMMENDATIONS

Give purpose to the rating system. Currently the prototype allows the user to rate an event when it is finished, but the ratings do not show up anywhere else on the applications. What is the point of the rating system then? Add the stars to the event page.

RECOMMENDATIONS

Recommendations:

- Provide more information regarding the event.
 - Could add a small description, distance, host, or rating.
- Could add a small (can be a faint color) that shows the user that there is something if you press the button.
- It is not immediately apparent how to change to different weeks other than the current week. An addition of arrows or some indication that it is scrollable.

RECOMMENDATIONS

- Confirmation messages
- Error messages eg. didn't fill in a required field when creating a game etc.
- What is the change location in the top right? if it's to change where you search games maybe put in into user profile to change?

RECOMMENDATIONS

- Basketball page: maybe an option to change to calendar view
- Add event: option to see other dates with events to plane in between eg. you want to make an event but you also want to attend the next vball game but you don't know when it is/ don't want conflicts in schedule
- Option to search event by user/# of people/ location/ time etc.
- Personal profile: shows rating/ reviews

RECOMMENDATIONS

- For the 'select a sport' screen the limits of the buttons aren't clear.
- Use some lines. This prevents user error.
- For a lengthy list of sports, the user could filter results with a search bar.
 - Could also include tabs for the all, user's favourite, and recent

RECOMMENDATIONS

Signify how to interact with the stars for rating.

Existence of interaction evident, however.
